

What are Space Spin-offs?

-Page 19
18

Space spin-offs are that are used on earth but were originally made to be used in space.

Some examples of Space Spin-off items are:

-The joystick controller

Can be used in video games

- Bar codes found on items you buy at stores

Bar code

- Cordless power tools

What are Space Spinoffs?

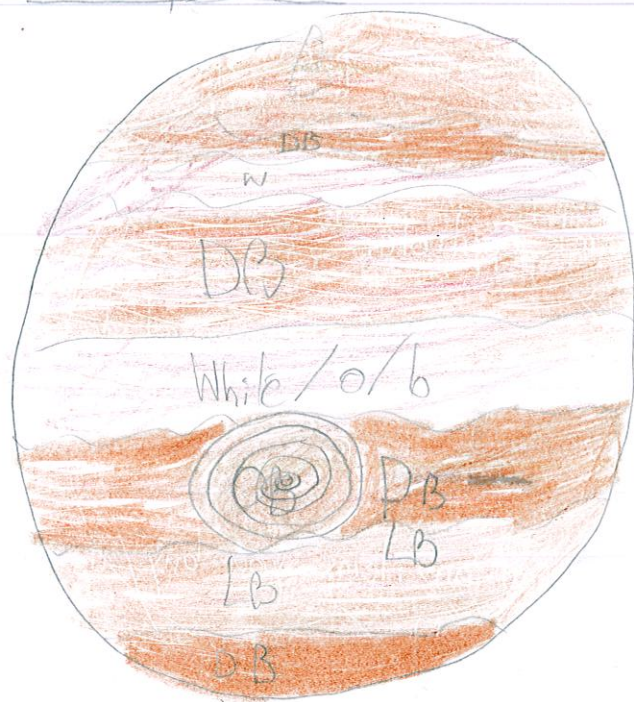

A Space spinoff is something that was designed and built to be used for space exploration but is now being used to benefit people on earth. Some examples of a Space-Spin Off is Flame-Resistant Materials (designed to protect astronauts in space suits and vehicles.) which is now used in firefighting, military, motor sports, and other things. Also Freeze dried foods (helped feed astronauts during long apollo missions) which preserves nutritional value and taste, while also reducing weight and increasing shelf life on earth.

What is your favorite Planet?

Page 20

Jupiter

Jupiter is my favorite planet because it is the biggest planet and is much bigger than all the other planets. Also Jupiter has a huge storm on it called the red spot which is super cool. Also Jupiter is very fast compared to Earth. It rotates in 9.8 hours! Isn't that cool!!

What is your favorite planet?

My favorite planet is Earth! The main reason is that it is the only planet that has life. Earth is a beautiful place with nature and life. We have so much knowledge and are constantly gaining more.
